

Welcome to The Inventory Beta!

Thank you for your help in creating **The Inventory** – a **WILDLABS** project to build a dynamic, collaborative, wiki-inspired database of conservation technology! Our goal is to make it much easier for you to be able to search, compare specs and share experiences about different conservation technologies, data sources, R&D projects and initiatives.

The Inventory is designed to be a place for conservationists to discover what technology is available for their work, how it is being used by others around the world, and what our conservation tech community would recommend.

The content on **The Inventory** can range from hardware such as camera traps to useful databases or ongoing tech development projects! The three main content types include:

- **Products** - Find tools that suit your project's needs and explore technology used globally by community members and experts. Products include hardware, software and data sources. Rate and review, share experiences, view stats, find links to purchase, and more.
- **R&D Projects** - Learn about and connect with conservation tech R&D projects, developing diverse technologies to use in a wide range of environments around the world. Keep up to date on their progress and discover how you can collaborate.
- **Organisations** - Browse conservation organisations, academic initiatives and technology companies working at the intersection of our fields, and discover their projects and products from throughout our community and beyond.

The Beta is the opportunity for the community to help populate The Inventory with useful content such as tech reviews! Just like Wikipedia, the information featured on the platform will grow and improve through community contributions.

As the site is in Beta, you may encounter bugs, incorrect or incomplete information throughout. We will also be rolling out new features to the site as they are built.

The following document provides some step-by-step guidance on how to use The Inventory. If you run into any issues accessing or using the site at any stage, please do get in touch and we will be happy to help – jake.burton@wildlabs.net

How do I access The Inventory?

Access to the Inventory Beta is currently given on a per-account basis, so visiting The Inventory without being logged in first will not let you in. After your account has been given access, follow these steps:

1. Go to <https://wildlabs.net/>
2. Log in to your **WILDLABS** account
3. Go to <https://wildlabs.net/inventory>

How do I invite other people to The Inventory?

If you would like to add others to The Inventory Beta, please do share our sign up form via the web-link or QR code below:

https://docs.google.com/forms/d/e/1FAIpQLSfD_-bK--CMwKJroLkj8hU6JQeUSRAZ-LWInNVniV3jDCfm_Q/viewform?usp=sf_link

How do I leave a review?

If you have used a conservation tech product, The Inventory provides a place for you to leave a review detailing how you used the tech, how you found it and if you would recommend it to other conservationists.

You can leave a review on a specific project you used them on, or you can voice your experience over multiple projects.

To leave a review, simply visit the page of the product you want to review and then follow the steps below:

1. **Click review** - Click the orange review text under the banner at the top of the product page.

The screenshot shows the 'The Inventory' website interface. At the top, there's a navigation bar with 'Products', 'R&D', 'Organisations', and a '+ Add' button. Below this, the main header area displays 'The Inventory' logo and 'Part of the WILDLABS Network'. The product title 'Product Example' is prominently displayed in a dark blue banner, with 'Hardware' listed below it. A timestamp indicates it was edited by a WILDLABS Member on 23 October 2023 at 11:32am. Below the banner, there are several filter tags: 'Hardware', 'Biologgers/tracking', 'Available for Group Buy', and 'Tested and Implemented'. The 'Reviews' section contains a paragraph explaining the importance of reviews and a red-bordered button that says 'Have you used this product? Click to leave your review'. A yellow arrow points to this button. To the right of the reviews section, there are two dropdown menus for 'Ecosystem' (with 'Terrestrial' selected) and 'Species Group' (with 'Amphibians' selected).

2. **Context** - Fill in the relevant drop-down options on section 1.

YOUR PRODUCT REVIEW

Product Example

Organisation Example

1 2 3 4

How long have you been using this product?
6 months - 1 year

How many units did you use?
10 - 19

What were you using this product for?
Funded conservation / research

3. **Positives + negatives** - Select any applicable positive traits of the product in section 2 and then any negative traits in section 3. (*you can select none*)

YOUR PRODUCT REVIEW

Product Example

Organisation Example

1 2 3 4

What are some of the **positives** about this product?

Good manufacturer support Good value for money
High durability Large data storage
Long battery life ✓

CANCEL NEXT

4. **Overall rating + written review** - In section 4, give the product a star rating, and then write a review detailing your experience using the product.

The written section of the review provides space for you to go into more detail about the context of using the product, as well the option to insert images of the tech or it being used.

The aim of these reviews is to help other potential users understand exactly how it was used and in what context, to better inform them which tech might be best for their upcoming work.

Some topics to cover that would be helpful for other readers:

- What species you have used the tech on
- Details of the project(s) the tech was used in
- How the product excelled or what limitations it had
- Clarifications to any of the positive or negative traits selected
- What type of work you would recommend this product be used for
- Links to any publications of the work.

Friendly reminder from your community team:

When you're writing your review, just keep in mind we're all people here, and that some of these tools are built by small and very hard-working teams who are doing their best with limited resources. If you're leaving a review on a piece of gear that hasn't performed well, try to be honest and helpful for other users, but also share information that could help the tool owner improve its performance. Assume best intent and be kind!

5. **Completion** - Once you press complete your review will be submitted and added to the product page. Your review is not editable after submitting, but if you would like a review deleted or amended due to an error, please contact the **WILDLABS** team.

Interacting with other people's reviews

- **Marking reviews as useful**

If you found another users' review helpful or if you agree with them, consider clicking the thumbs up to mark their review as useful. You can sort review sections by date, and by number users who marked the review as useful.

The screenshot shows a 'Reviews' section with a star rating of 4.5. It displays a summary of feedback from October 2023 to the present. The summary includes:

+ Good image quality	3 100%	- Small data storage	2 67%
+ Good value for money	2 67%	- Poor weather proofing	1 33%
+ High durability	1 33%		

Below the summary is a 'Sort by' dropdown set to 'Latest first'. The first review is from a 'WILDLABS Member' with a 4.5 star rating and a date of 12/10/2023. The review includes filters for 'Using product' (3-5 years), 'No. of units' (10-19), and 'Product lifespan' (<6 months). The review text highlights 'Good image quality / Good value for money' and 'Small data storage'. A thumbs up icon with '1' and a report icon are visible next to the review. A yellow arrow points to the thumbs up icon.

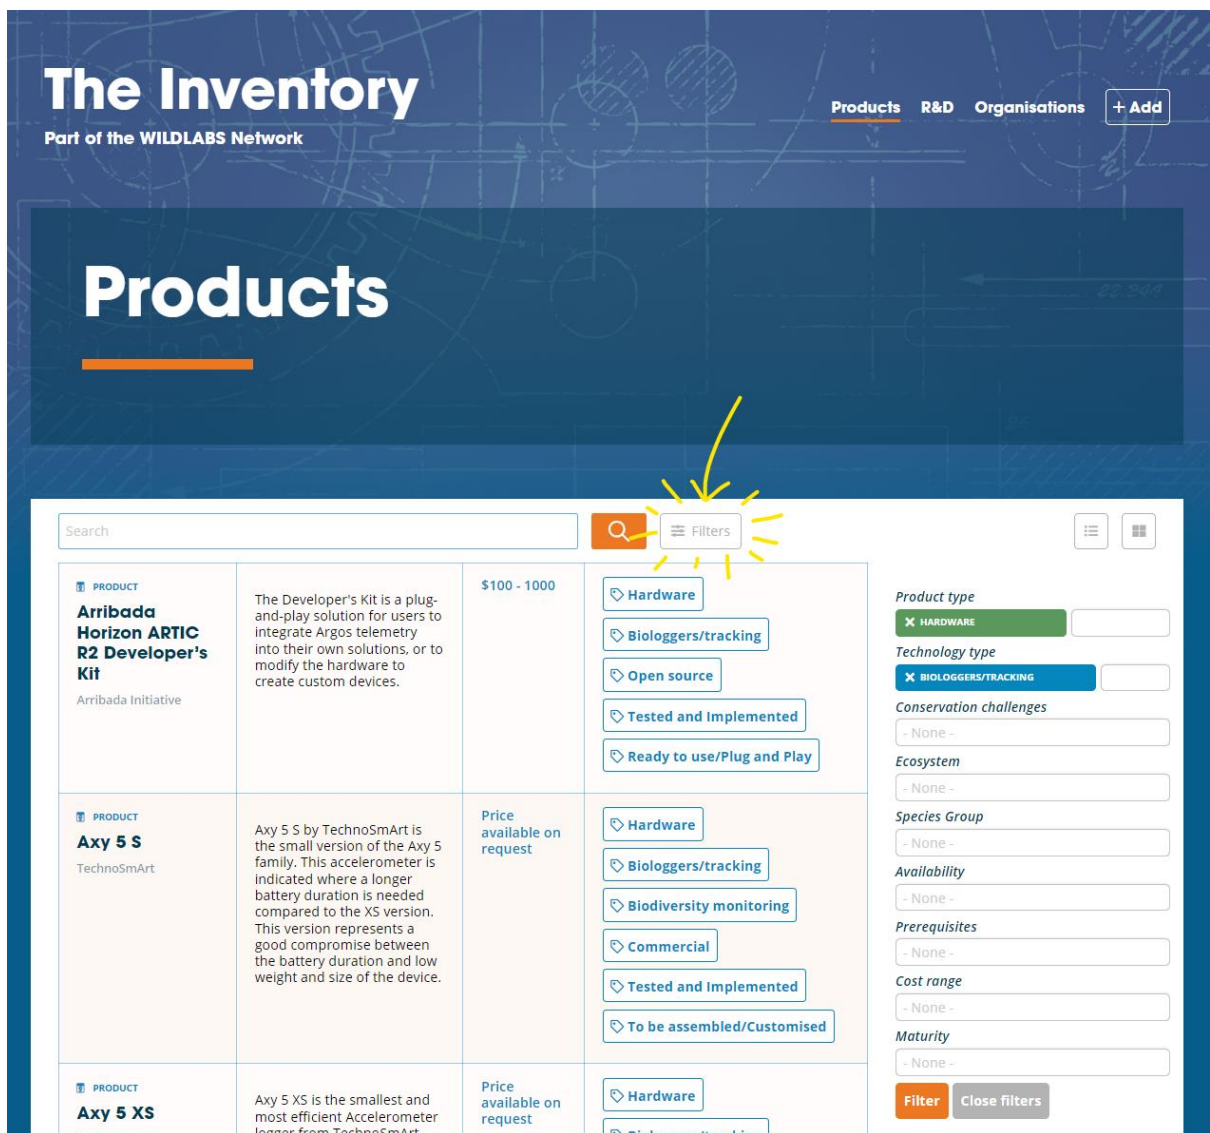

- **Reporting reviews**

If you believe a review to be inappropriate, spam or breaking our [community guidelines](#), please use the report feature located next to each review to notify our admin team.

This close-up shows a review with a 4.5 star rating and a date of 10/10/2023. Below the review are two buttons: a thumbs up icon with '0' and a report icon. A yellow arrow points to the report icon.

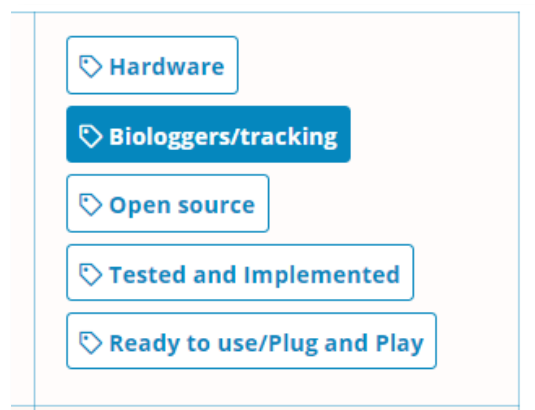

How do I find content?

The easiest way to explore the site is to visit one of the three main content pages ([Products](#), [R&D Projects](#), or [Organisations](#)) and filter the content using our various tags.

You can also click on tags to either filter the content table by that tag, or to visit one of our various dedicated tag pages.

If you know the name of the content you are looking for, the wider search page might also prove useful to search across all three content types <https://wildlabs.net/inventory/search>

How do I add content?

You can add new products, R&D projects or conservation tech organisations to the Inventory.

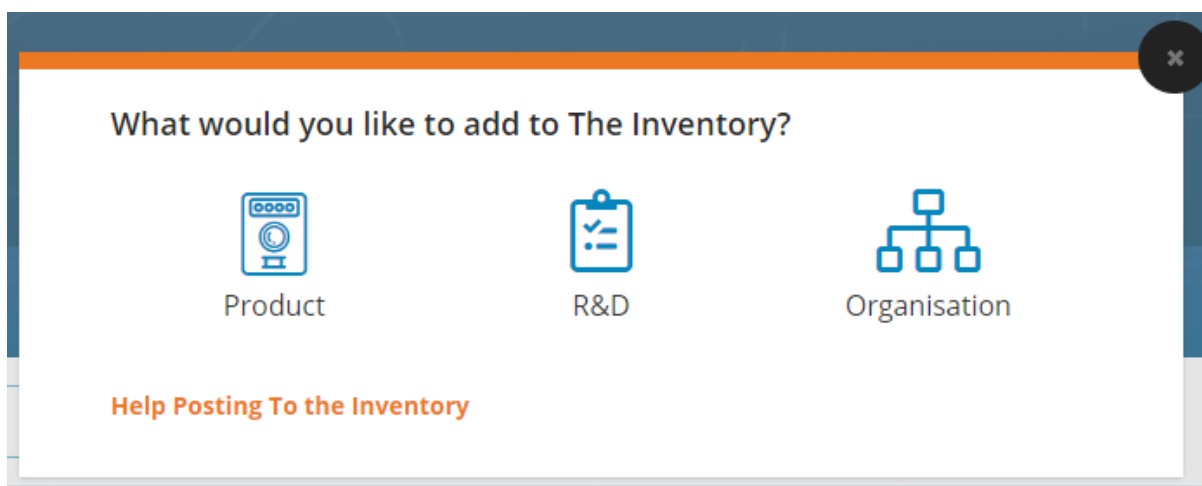

To ensure we are capturing as much of the conservation tech available, we will be engaging with various conservation tech manufacturers to help add content throughout the Beta. While this process is ongoing, if you spot anything that seems missing from the current list, please do add it as a new listing to help improve the database!

To add new content, follow the steps below:

1. Search for the Product, R&D project, or Organisation first to make sure it's not already captured on the Inventory. Duplicates will have to be merged or deleted. <https://wildlabs.net/inventory/search>
2. Press the add button on the top right of any Inventory page.

3. Select which content type you would like to add.

4. Fill in the compulsory fields on the pop-up.

ADD INVENTORY CONTENT FORM

Product name *

Overview *

In 1 or 2 paragraphs, write a short overview explaining what this product is, and what it can be used for.

Product Type *

- Select -

Technology Type *

- Select -

Submit

5. Once submitted you will be sent to the new content page while in edit mode, with most of the details blank. If you know any further details, please do have a go at filling them in!

If you don't know what to put into a field, it's better to leave it blank for someone else to complete. We do however suggest at least filling in the 'Short summary' field in the top banner, which is just a 1-2 sentence description of the content that will appear in on tables and cards throughout the site.

PRODUCT

New product

Hardware

Short summary for card views and tables:

WILDLABS Member edited technology type - 10 October 2023 2:35pm

SHORT SUMMARY

Briefly summarise this product in 1-2 sentences.

Content limited to 280 characters, remaining: **280**

Save →

Once you have finished adding the information, you can press the edit button toggle in the top right of the content page to exit edit mode.

How do I edit content?

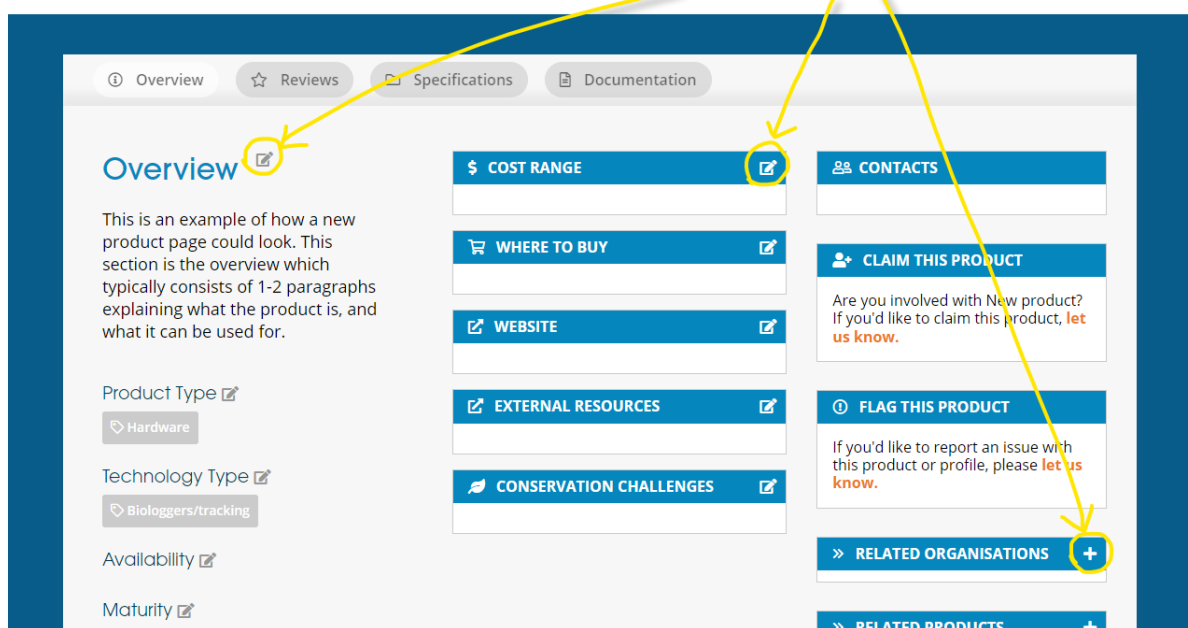

In addition to adding new content, you can edit any existing Product, R&D Project or Organisation page similar to a wiki site. Your help as conservation tech specialists will be instrumental in ensuring our database is accurate.

To edit any content page, all you need to do is:

1. Press the edit button toggle in the top right of the page to switch that page into edit-mode.

2. Click the edit or plus icon on any of the sections on the page to edit it in a pop-up menu. These are typically located next to the title of the section.

3. When edit-mode toggled on, each of the blank sections on the page will become visible. Each section will have a different set of options when editing them, and free-text sections should include brief guidance on what to write.

Some section clarifications:

Short summary

This section is what appears on tables and cards throughout the site. This should be a 1-2 sentence brief summary of the content (280 characters max).

Specifications

List key relevant specifications e.g. dimensions, battery size, weight. We recommend using bullet points or a table, but you can also use this section to clarify any custom options available.

Gallery

Use this section to add any interesting photos of how you are using the product!

Adding custom products

If a manufacturer supplies a product that is only available as a custom device on request, these can still be featured on The Inventory. We suggest leaving any non-relevant sections blank but clarifying that is a custom product in the overview section, and then detailing what different customisation options are available in the specifications section.

Adding a series of product variants

When a manufacturer provides a series of similar products but with minor variations (*e.g. the same model but it comes in different sizes*), it is sometimes more prudent to make a single product page for the series of products instead of listing each variant separately.

Typically, if you can convey the differences in a simple table in the specifications section, then it might be easier to list a series as a single product page. If the differences between variants are too numerous or complicated to convey in the specifications section, consider linking to the page detailing what variants available.

How do I link WILDLABS content to the Inventory?

The Inventory is an extension of the existing **WILDLABS** site, so all **WILDLABS** content you create or have created in the past can be featured on Inventory pages, and all Inventory content can be featured on your **WILDLABS** posts!

So, if you have any **WILDLABS** discussions, resources or events that involve an existing Product, R&D Project or Organisation, please connect them to the Inventory!

To link relevant **WILDLABS** content to any Inventory content, follow the steps below:

1. Edit one of your existing posts or create a new post on [WILDLABS](#)
2. Find the 'Related Inventory Content' field in the editing form and then search for the names of any existing Inventory Products, R&D Projects, or Organisations

The screenshot shows a portion of the WILDLABS editing interface. At the top, there is a 'Related articles' dropdown menu currently set to '- None -'. Below it is the 'Related Inventory Content' section, which includes a search input field containing the text 'New product'. A dropdown menu is open below the search field, showing a list of items with 'New product' selected. At the bottom of this section is an orange 'Save' button.

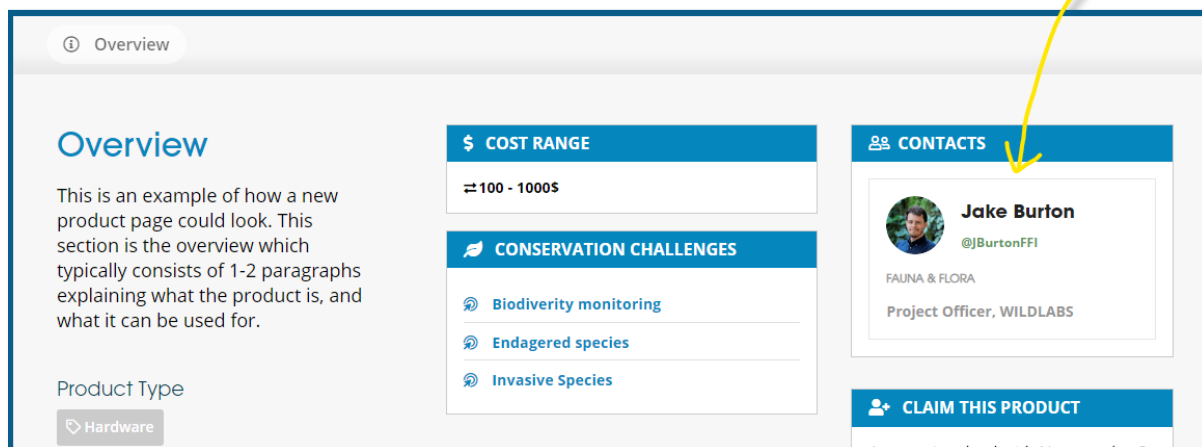

3. Once added, the related Inventory content will appear at the bottom of your **WILDLABS** post and vice versa!

Please note that while in Beta, only **WILDLABS** members with access to The Inventory will be able to see these links. But once we launch, all the related Inventory content you have linked to your posts will become visible to everyone!

How can I claim a page?

Product and R&D Project pages both have an option to claim pages, which sends a request to be made a key contact for that content. Key contacts for pages are intended to be representatives of the manufacturer or R&D project lead who will be able to monitor content changes on their pages.

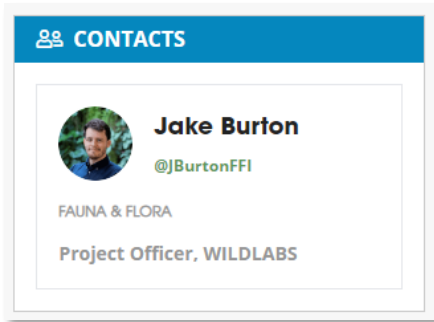

To become the key contact for a Product or R&D Project, simply click the claim link on the page to send a request to the admin team.

If you would like to be made the key contact for multiple pages (*e.g. a series of products from the same manufacturer*), you can let us know when submitting the claim form or just contact the admin team directly – jake.burton@wildlabs.net

What can a key contact do?

Once you have been approved as a key contact for a page or series of pages, your **WILDLABS** account card will be featured on those pages. Other members will see your account as the one to reach out to for questions about your Product or your R&D Project.

Your **WILDLABS** account will also be given the following extra powers:

1. **Edit notifications** - An email / on-site notification when a **WILDLABS** member has left a review, edited or contributed to your page(s).
2. **Revert changes** - The ability to see the edit history of a page and revert it to a previous version.
3. **Respond to reviews** - You can reply to the reviews on your product page.
4. **Add other key contacts** - as an existing key contact, you can add edit the contacts section and select another **WILDLABS** member to be a key contact as well. If you would like to be removed as a key contact, please contact the **WILDLABS** team.
5. **Pin WILDLABS content** - As a key contact, you have extra powers to add 'pinned' content to the top of the **WILDLABS** content section. Click the edit button next to the Pinned heading, and you'll be able to search for important **WILDLABS** content you want to feature.

If you would like any other features/abilities as a key contact, please reach out to Jake at the **WILDLABS** team - jake.burton@wildlabs.net

How do I report problems or bugs?

Have you noticed any bugs, parts of the website not working or something behaving in an unexpected way? Please email Jake at jake.burton@wildlabs.net with the following details and he will be happy to help resolve them:

- What went wrong
- What page / section this happened
- A screenshot of the issue if possible
- Your browser + operating system (e.g. *Chrome, Windows 11*)

If you encounter content that looks like spam or inappropriate on any page, such as on a product or on a review. You can use one of the on-page report features to send the admin team an email and we will promptly resolve the issue.
